

Clinical Policy: Preventive (Routine) Eye Examination

Reference Number: OC.UM.CP.0013

Last Review Date: 06/2023

[Coding Implications](#)

[Revision Log](#)

See [Important Reminder](#) at the end of this policy for important regulatory and legal information.

Description

A thorough ophthalmic evaluation can detect common abnormalities of the visual system and related structures as well as less common yet extremely serious ones, such as ocular tumors. Such an evaluation can also uncover evidence of systemic disease that have associated ophthalmic manifestations. All patients, particularly those with risk factors for ocular disease, should be re-examined periodically to prevent or minimize vision loss by detecting and treating the disease at an early stage.

Policy/Criteria

- I. It is the policy of health plans affiliated with Envolve Vision, Inc.[®] (Envolve) that preventive (routine) eye examinations are **medically necessary** for the following indications:
 - A. Evaluation of the visual system and related structures
 1. When the initial comprehensive evaluation is normal or involves only optical abnormalities that require corrective lenses, the eye care provider reviews the findings with the patient and renders advice regarding an appropriate interval for re-examination. Although this is considered a low-risk category, periodic re-examination is indicated to detect new, potentially asymptomatic, or unrecognized ocular disease, such as glaucoma, diabetic retinopathy, and AMD, the incidence of which increases with age.
 - a. Comprehensive evaluation of patients with no risk factors is recommended at the following frequencies:
 - i. Pediatrics: *see OC.UM.CPG.0047 Pediatric Eye Examinations*
 - ii. Adults under 40 years of age: every 5-10 years
 - iii. Ages 40-54 years of age: every 2-4 years
 - iv. Ages 55-64: every 1-3 years
 - v. Ages 65 and older: every 1-2 years
 - b. Interim evaluations, such as screenings, refractions, or less extensive evaluations, are indicated to address episodic minor problems and complaints, or for patient reassurance. The extent of the interim evaluation to be performed is determined by the patient's condition, symptoms, and by the ophthalmologist's medical judgment.
 - c. A patient is considered to be at increased risk when the evaluation reveals signs that are suggestive of a potentially abnormal condition or when risk factors for developing ocular disease are identified but the patient does not yet require intervention. These situations may merit closer follow-up to monitor the patient's ocular health and to detect early signs of disease with additional

CLINICAL POLICY

Preventive (Routine) Eye Examination

testing. The eye care provider will determine the appropriate follow-up interval for each patient based on the presence of early symptoms and signs, risk factors, the onset of ocular disease, and the potential rate of progression of a given disease.

Background

An eye examination consists of an evaluation of the physiological function and the anatomical status of the eye, visual system, and its related structures. This usually includes the following elements, based on the patient's history and findings, additional tests or evaluations might be indicated to evaluate further a particular structure or function:

- Visual acuity with current correction (the power of the present correction recorded) at distance and, when appropriate, at near, with a refraction when indicated;
- Visual fields by confrontation or automated screening devices (non-threshold);
- External examination (e.g., eyelid position and character, lashes, lacrimal apparatus and tear function; globe position; and pertinent facial features);
- Pupillary function (e.g., size and response to light, relative afferent pupillary defect);
- Ocular alignment and motility (e.g., cover/uncover test, alternate cover test, version and duction assessment);
- Slit-lamp biomicroscopic examination: eyelid margins and lashes; tear film; conjunctiva; sclera; cornea; anterior chamber; and assessment of central and peripheral anterior chamber depth, iris, lens, and anterior vitreous;
- Intraocular pressure measurement, preferably with a contact applanation method (typically a Goldmann tonometer). Contact tonometry may be deferred in the setting of suspected ocular infection or corneal trauma.
- Fundus examination: mid and posterior vitreous, retina (including posterior pole and periphery), vasculature, and optic nerve
 - See clinical policy OC.UM.CPG.0024 *Dilation during Examination of the Eye*
- Assessment of relevant aspects of patient's mental and physical status

Envolve Vision, Inc. has established minimum standards for practitioner documentation and maintenance of medical records including record content, record organization and maintaining confidentiality for all Protected Health Information (PHI). Providers must keep accurate and complete records that are legible, complete, dated, timed, signed and authenticated in written or electronic form by the person responsible for providing the service, including but not limited to examination notes, imaging and diagnostic tests, prescriptions, referrals, and operative notes.

All examinations require the signature of the rendering provider with the following requirements:

- The signature must be a legible handwritten signature or initials; a reviewer must be able to determine whose signature is used
- Electronic signatures should contain date and timestamps and include printed statements, e.g., "electronically signed by" or "verified/reviewed by" the rendering provider's name and preferably a professional designation. The authorship related to the signature must be clearly defined in the record.
- Digitized signature – an electronic image of the rendering provider's handwritten signature reproduced in its identical form using a pen tablet.
- Stamp signatures are not acceptable.

Coding Implications

This clinical policy references Current Procedural Terminology (CPT[®]). CPT[®] is a registered trademark of the American Medical Association. All CPT codes and descriptions are copyrighted 2023, American Medical Association. All rights reserved. CPT codes and CPT descriptions are from the current manuals and those included herein are not intended to be all-inclusive and are included for informational purposes only. Codes referenced in this clinical policy are for informational purposes only. Inclusion or exclusion of any codes does not guarantee coverage. Providers should reference the most up-to-date sources of professional coding guidance prior to the submission of claims for reimbursement of covered services.

CPT[®] Codes	Description
92002	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; intermediate, new patient
92004	Ophthalmological services: medical examination and evaluation with initiation of diagnostic and treatment program; comprehensive, new patient, 1 or more visits
92012	Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; intermediate, established patient
92014	Ophthalmological services: medical examination and evaluation, with initiation or continuation of diagnostic and treatment program; comprehensive, established patient, 1 or more visits
92015	Refraction

According to the ICD-10-CM Official Guidelines for Coding and Reporting, diagnosis codes are to be used and reported at their highest number of characters available. ICD-10-CM diagnosis codes are composed of codes with 3, 4, 5, 6, or 7 characters. Codes with three characters are included in ICD-10-CM as the heading of a category of codes that may be further subdivided by the use of fourth and/or fifth characters and/or sixth characters, which provide greater detail. A three-character code is to be used only if it is not further subdivided. A code is invalid if it has not been coded to the full number of characters required for that code, including the seventh character if applicable. Codes that describe symptoms and signs, as opposed to diagnoses, are acceptable for reporting purposes when a related definitive diagnosis has not been established (confirmed) by the provider. If a definitive diagnosis has not been established by the end of the encounter, it is appropriate to report codes for sign(s) and/or symptom(s) in lieu of a definitive diagnosis. When sufficient clinical information isn't known or available about a particular health condition to assign a more specific code, it is acceptable to report the appropriate "unspecified" code (e.g. a diagnosis of pneumonia has been determined, but not the specific type). Unspecified codes should be reported when they are the codes that most accurately reflects what is known about the patient's condition at the time of that particular encounter. It would be inappropriate to select a specific code that is not supported by the medical record documentation or conduct medically unnecessary diagnostic testing in order to determine a more specific code.

CLINICAL POLICY

Preventive (Routine) Eye Examination

Envolve complies with the coding guidelines of the health plan and/or State in which the client resides. When billing 92004/92014, the need for a comprehensive examination must be documented in the record. Abnormal comparative utilization of comprehensive examination coding is subject to retrospective review. Refractive diagnoses unaccompanied by complicating comorbidities will be interpreted as a routine intermediate ophthalmological examination (S0620/S0621 or 92002/92012 and 92015 – if applicable).

HCPCS Codes	Description
S0620	Routine ophthalmological examination including refraction; new patient
S0621	Routine ophthalmological examination including refraction; established patient

The coverage of services rendered is dependent on the purpose of the examination (as reflected in the chief complaint) rather than on the ultimate diagnosis of the patient's condition. Primary ICD-10[®] diagnosis must match the chief complaint. Medical diagnosis codes determined at the time of routine examination should be considered a co-morbidity.

ICD-10[®] codes labeled "other specified" (e.g. other specified visual disturbances) or "unspecified" (e.g. subjective visual disturbance, unspecified) do not meet the requirements of a valid co-morbidity, or medical reimbursement. ICD-10[®] codes that describe signs and symptoms (e.g. headache, pain in or around the eye, visual discomfort), as opposed to diagnoses, are suitable only when a diagnosis has not been established and do not meet the requirements of a valid co-morbidity or medical reimbursement.

ICD-10-CM Diagnosis Codes that Support Coverage Criteria

+ Indicates a code requiring an additional character

ICD-10-CM Code	Description
H52.01	Hypermetropia, right eye
H52.02	Hypermetropia, left eye
H52.03	Hypermetropia, bilateral
H52.11	Myopia, right eye
H52.12	Myopia, left eye
H52.13	Myopia, bilateral
H52.211	Irregular astigmatism, right eye
H52.212	Irregular astigmatism, left eye
H52.213	Irregular astigmatism, bilateral
H52.221	Regular astigmatism, right eye
H52.222	Regular astigmatism, left eye
H52.223	Regular astigmatism, bilateral
H52.31	Anisometropia
H52.32	Aniseikonia
H52.4	Presbyopia
H52.521	Paresis of accommodation, right eye
H52.522	Paresis of accommodation, left eye

CLINICAL POLICY

Preventive (Routine) Eye Examination

ICD-10-CM Code	Description
H52.523	Paresis of accommodation, bilateral
H52.531	Spasm of accommodation, right eye
H52.532	Spasm of accommodation, left eye
H52.533	Spasm of accommodation, bilateral
Z01.00	Encounter for examination of eyes and vision without abnormal findings
Z01.01	Encounter for examination of eyes and vision with abnormal findings
Z01.020	Encounter for examination of eyes and vision following failed vision screening without abnormal findings
Z01.021	Encounter for examination of eyes and vision following failed vision screening with abnormal findings

Reviews, Revisions, and Approvals	Date	Approval Date
Annual Review	12/2019	12/2019
Converted to a new template; Revised ICD-10 diagnosis codes	12/2020	12/2020
Clarified recommendation for frequency of comprehensive examinations	06/2021	07/2021
Annual Review; Updated ICD-10 diagnosis codes related to headache; Updated References.	12/2021	12/2021
Added ICD-10 codes for refractive hardware to policy Attachment A. Updated references.	08/2022	10/2022
Annual Review	11/2022	11/2022
Annual Review; Removed diagnoses related to headaches as medical indications for routine (preventive) examination; Updated References.	06/2023	07/2023

Important Reminder

CLINICAL POLICY

Preventive (Routine) Eye Examination

This clinical policy has been developed by appropriately experienced and licensed health care professionals based on a review and consideration of currently available generally accepted standards of medical practice; peer-reviewed medical literature; government agency/program approval status; evidence-based guidelines and positions of leading national health professional organizations; views of physicians practicing in relevant clinical areas affected by this clinical policy; and other available clinical information. The Health Plan makes no representations and accepts no liability with respect to the content of any external information used or relied upon in developing this clinical policy. This clinical policy is consistent with standards of medical practice current at the time that this clinical policy was approved. “Health Plan” means a health plan that has adopted this clinical policy and that is operated or administered, in whole or in part, by Envolve Vision, Inc., or any of such health plan’s affiliates, as applicable.

The purpose of this clinical policy is to provide a guide to medical necessity, which is a component of the guidelines used to assist in making coverage decisions and administering benefits. It does not constitute a contract or guarantee regarding payment or results. Coverage decisions and the administration of benefits are subject to all terms, conditions, exclusions and limitations of the coverage documents (e.g., evidence of coverage, certificate of coverage, policy, contract of insurance, etc.), as well as to state and federal requirements and applicable Health Plan-level administrative policies and procedures.

This clinical policy is effective as of the date determined by the Health Plan. The date of posting may not be the effective date of this clinical policy. This clinical policy may be subject to applicable legal and regulatory requirements relating to provider notification. If there is a discrepancy between the effective date of this clinical policy and any applicable legal or regulatory requirement, the requirements of law and regulation shall govern. The Health Plan retains the right to change, amend or withdraw this clinical policy, and additional clinical policies may be developed and adopted as needed, at any time.

This clinical policy does not constitute medical advice, medical treatment or medical care. It is not intended to dictate to providers how to practice medicine. Providers are expected to exercise professional medical judgment in providing the most appropriate care, and are solely responsible for the medical advice and treatment of members. This clinical policy is not intended to recommend treatment for members. Members should consult with their treating physician in connection with diagnosis and treatment decisions.

Providers referred to in this clinical policy are independent contractors who exercise independent judgment and over whom the Health Plan has no control or right of control. Providers are not agents or employees of the Health Plan.

This clinical policy is the property of the Health Plan. Unauthorized copying, use, and distribution of this clinical policy or any information contained herein are strictly prohibited. Providers, members and their representatives are bound to the terms and conditions expressed herein through the terms of their contracts. Where no such contract exists, providers, members and their representatives agree to be bound by such terms and conditions by providing services to members and/or submitting claims for payment for such services.

CLINICAL POLICY

Preventive (Routine) Eye Examination

Note: For Medicaid members, when state Medicaid coverage provisions conflict with the coverage provisions in this clinical policy, state Medicaid coverage provisions take precedence. Please refer to the state Medicaid manual for any coverage provisions pertaining to this clinical policy.

Note: For Medicare members, to ensure consistency with the Medicare National Coverage Determinations (NCD) and Local Coverage Determinations (LCD), all applicable NCDs, LCDs, and Medicare Coverage Articles should be reviewed prior to applying the criteria set forth in this clinical policy. Refer to the CMS website at <http://www.cms.gov> for additional information.
